

FAS Professional Services

FAS Installation and Implementation Services

Ensure your FAS solution is installed and implemented according to your precise specifications and deadlines. FAS Professional Services can provide you with a range of assistance from basic installation to complete turnkey solutions that include complex data conversions and product customizations. Backed by a wealth of real world experience, our consultants help you get up and running fast with:

- **Project Planning** — Obtain a detailed project plan from our consultants that highlights installation milestones and estimated completion dates so you know your priorities will be met on time.
- **System Requirements** — Utilize our consultants to ensure your hardware and network platform meets FAS system requirements.
- **Software Installation** — Depend on us to guarantee proper installation of FAS on each server and workstation you require.
- **Data Conversion** — Convert your legacy data easily and accurately so you can continue tracking your assets with minimal downtime. Our consultants are experts at efficiently pulling all your information directly into FAS—without the hassle of re-keying. (NOTE: This service is performed off-site only)
- **Product Customization** — Simplify asset tracking and take advantage of the flexible user-defined fields in FAS. Our consultants can help you create specialized asset groupings, merge several companies into one database, or make global data changes.

FAS Data Services

Get peace of mind knowing your database is safe and intact should you ever experience a computer virus, “lock up,” or brown-out. Simply send your database to us and we will identify potential corruption issues so you can minimize the possibility of data loss, application downtime, and costs associated with database problems.

- **Database Diagnosis** — A corrupt database may not show outward symptoms. Therefore, we employ read-only utilities to ensure the integrity of your database and confirm the key structural components of your FAS database are intact and operational. With this service you'll benefit from:
 - Identification of corruption issues before data loss occurs
 - No application downtime during the diagnostic process
 - Assurance that your database is free from corruption

- Database Rebuild — If we've discovered a problem in the diagnostic process, our consultants will use powerful utilities to correct database failure and rebuild your corrupt database files. We'll also perform a test against the latest version of FAS to confirm that the rebuild process corrected or eliminated the problem. The database rebuild service helps you:
 - Minimize data loss and application downtime
 - Ensure your database has been properly repaired
 - Reduce costs associated with re-keying all your asset data
- Database Upgrade — If you have a tight schedule and limited resources to upgrade your present FAS database to be compatible with the current version of the FAS application, FAS Professional Services can save you time by ensuring all schema changes are properly applied and validating the structural integrity of each database.

FAS Custom Interface Services

Integrate your company's critical legacy systems with FAS and save time by eliminating time-consuming manual processes. If you need to automate data transfer between FAS and your legacy system or seamlessly integrate them, FAS Professional Services can build an interface specific to your company's needs.

FAS Custom Report Writing Services

Maximize the powerful reporting capabilities of FAS and gain control and flexibility over the content and appearance of your company's critical reports. Best Software's report experts can help you plan and create custom report templates that meet your organization's precise management and reporting requirements.

FAS Consultative Services

Gain immediate benefits from your FAS solution. If your company is new to in-house fixed asset management, FAS Professional Services can guide you through personnel interviews, basic asset education, product selection and resource planning to help you discover, learn and prepare for the full scope of your company's fixed asset picture.
